Executive summary

We reviewed Sample Construction Co. against WCAG 2.2 Level A and AA. The Accessibility index is 100 out of 100. We tested 10 pages across 2 screen sizes. Results: pass 42, not applicable 13, fail 0, partial 0, needs verification 0. These add up to 55 criteria. No critical, serious, moderate, or minor issues were detected, and we found 0 distinct issues.

Since the last check, the Accessibility index increased from 65.4 to 100. 37 issues were fixed. 0 remain, and 0 new issues were introduced. A manual review of 9 pages on 2026-11-04 found 0 findings, which supports the scan results.

What matters most for visitors is that the site stays easy to use with a keyboard, has clear labels, readable contrast, and helpful error messages. No changes are required today. To keep this level of quality, add an accessibility check to your publishing workflow and retest after theme or plugin updates or larger content changes.

100 / 100

Accessibility index, from 42 decided criteria. This is a weighted score of the WCAG criteria decided so far, not a percentage of compliance.

0	0	42	0
criteria fail	criteria partly met	criteria pass	need human verification

Conformance estimate: No failures found in the criteria tested. A formal conformance claim still needs a short human screen-reader pass.

Risk level: Low. We found 0 distinct issues: 0 critical, 0 serious, 0 moderate and 0 minor, across 10 pages at 2 screen sizes.

No failures were found by the automated scan.

Testing performed

- ✓ **Automated scanning**
  axe-core 4.14.0 and IBM Equal Access 4.0.34, 10 pages
- ✓ **AI-assisted manual review**
  November 4, 2026, 9 pages: keyboard, structure, reflow, zoom, forms
- ✓ **Screen-reader testing**
  NVDA 2026.2 (via Guidepup 0.36.4), Google Chrome on November 4, 2026, 10 pages
- – **Verification by a qualified human tester**
  not done

The more of these a report rests on, the higher the confidence in its findings. Only testing by people who use assistive technology can confirm the experience they have.

> The opening paragraphs were written with AI (gpt-5) from the results in this report and checked automatically: every figure matches the results, and nothing claims compliance. The rest of this summary comes directly from the scan, scoring and manual review results.

Before and after

This report compares the scan of November 4, 2026 with the scan of November 3, 2026, issue by issue.

65.4 → 100	37	0	0
Accessibility index, up 34.6	issues fixed	issues remaining	new issues

Pages added since the earlier scan: `/site-map/`. Pages removed: none. Issues on these pages are listed separately, not as fixes or new issues.

Fixed	**No way to skip past the header to the main content**	Moderate	2.4.1	1 page before
Fixed	**The main menu is the only way to find pages**	Minor	2.4.5	1 page before
Fixed	**The sidebar form jumps ahead of the page in tab order**	Moderate	2.4.3	1 page before

Index over time

The Accessibility index of each report since the baseline. A dashed line marks a rule change (a new rubric or engine version), where the index can move without the site changing.

Index by report

Report	Accessibility index	Rule changes since the previous report
November 3, 2026 (baseline)	65.4	None
November 4, 2026	100	None

WCAG 2.2 criteria

Every Level A and AA success criterion in WCAG 2.2 Level A and AA, with its status. A criterion is marked **Pass** only when it was verified: automated scans can prove a failure for most criteria but not a pass, so clean results stay **Needs human verification** until the manual review decides.

1. Perceivable

Criterion	Name	Level	Status	Details
1.1.1	Non-text Content	A	Pass	Every informative image has a text alternative: the 9 pages have 42 named images and no unnamed ones (accessibility tree), and the project gallery photos, which had empty alt text, now name the project and place. Background photos, the footer icon and testimonial portraits are decorative, with the names in text beside them; the team portraits flip to show each person's name and role. Icons and images also stay visible in forced-colors mode.
1.2.1	Audio-only and Video-only (Prerecorded)	A	Not applicable	No audio or video on the reviewed pages.
1.2.2	Captions (Prerecorded)	A	Not applicable	No video on the reviewed pages.
1.2.3	Audio Description or Media Alternative (Prerecorded)	A	Not applicable	No video on the reviewed pages.
1.2.4	Captions (Live)	AA	Not applicable	No live media.
1.2.5	Audio Description (Prerecorded)	AA	Not applicable	No video on the reviewed pages.
1.3.1	Info and Relationships	A	Pass	Every page has one h1 that names it, heading levels are in order (client-name lists are paragraphs, carousel titles h3, the empty footer h2 and h2-to-h4/h5 skips are gone), and each page has banner, main, contentinfo and navigation landmarks; the footer aside is labeled "Contact Us". M004 fixed.
1.3.2	Meaningful Sequence	A	Pass	Reading order follows the visual order at both viewports.

Criterion	Name	Level	Status	Details
1.3.3	Sensory Characteristics	A	Pass	No instructions rely on shape, position or sound.
1.3.4	Orientation	AA	Pass	Content works in landscape at 844×390 with no rotate prompt.
1.3.5	Identify Input Purpose	AA	Pass	The contact form and the sidebar form set autocomplete given-name/name, email and tel. M007 fixed.
1.4.1	Use of Color	A	Pass	Links sit in navigation or as buttons; no color-only information found.
1.4.2	Audio Control	A	Not applicable	No audio.
1.4.3	Contrast (Minimum)	AA	Pass	All text meets its contrast minimum. Text the engines couldn't decide (over photos, gradients and overlays: 895 elements in every page state) was measured with the Audsey contrast helper against the darkest and lightest pixels behind it; the carousel captions, team cards, footer photo and form button were fixed and all now pass, including hover and focus states.
1.4.4	Resize Text	AA	Pass	At 200% browser zoom (emulated as 640 CSS px at device scale 2) all pages switch to their mobile layout and stay readable. The Elementor pages can scroll a little sideways into empty space because of the hidden mobile menu; no content is lost.
1.4.5	Images of Text	AA	Pass	Text in images is in project photography (signage), which is exempt.
1.4.10	Reflow	AA	Pass	At 320 px all content reflows into one column. Rechecked with Sample Construction's real fonts (the local copy had been falling back to Arial): in the display font, long words in five large headings (the home hero, "Contact Us", "Our Values" and two team names) ran past their box and off the screen, so the theme now shrinks any heading that doesn't fit, just enough to fit, on screens up to 480 px. The page can scroll 37 px sideways into empty space because the closed mobile menu sits off screen; worth fixing, but no content needs two-dimensional scrolling.
1.4.11	Non-text Contrast	AA	Pass	Form field borders are 1 px black; the focus outline is the browser default and visible against the header.

Criterion	Name	Level	Status	Details
1.4.12	Text Spacing	AA	Pass	With the text-spacing override the header contact bar, menu and form wrap without clipping (desktop and mobile).
1.4.13	Content on Hover or Focus	AA	Not applicable	No custom content appears on hover or focus; the menu has no submenus.

2. Operable

Criterion	Name	Level	Status	Details
2.1.1	Keyboard	A	Pass	Every control in both key flows works from the keyboard, including the mobile menu (Enter and Space), carousel arrows, gallery controls and the contact form on all pages.
2.1.2	No Keyboard Trap	A	Pass	Tabbing cycles through all 9 pages at both screen sizes with no trap.
2.1.4	Character Key Shortcuts	A	Not applicable	No single-key shortcuts.
2.2.1	Timing Adjustable	A	Not applicable	No time limits.
2.2.2	Pause, Stop, Hide	A	Pass	Autoplay is off on the Recent Projects and Testimonials carousels; neither moved in an 8-second watch. M001 fixed.
2.3.1	Three Flashes or Below Threshold	A	Pass	Nothing flashes.
2.4.1	Bypass Blocks	A	Pass	"Skip to content" is the first Tab stop on every page and moves focus to the main landmark, which every page now has. M003 fixed.
2.4.2	Page Titled	A	Pass	Each page has a descriptive title.
2.4.3	Focus Order	A	Pass	Focus order follows the layout on all walked pages with no backward jumps: the Gravity Forms tabindex is gone and Back to Top is now last in the page. M009 fixed. After a successful send the contact form leaves focus on the page (usability note, unchanged).
2.4.4	Link Purpose (In Context)	A	Pass	Every link's purpose is clear from its text or context: 172 links across the 9 pages, none unnamed; the logo links read "Sample Construction Co. home", social links name the network and say they open a new tab, and footer links inside a line of text are underlined.

Criterion	Name	Level	Status	Details
2.4.5	Multiple Ways	AA	Pass	A Site Map page lists every page and project and is linked from both footers. M005 fixed.
2.4.6	Headings and Labels	AA	Pass	Headings and form labels describe their topic and purpose. M004 fixed. The NVDA pass found the project template's photo heading read only "Image"; it now reads "Project photo".
2.4.7	Focus Visible	AA	Pass	Every Tab stop on the walked pages shows a focus indicator, including the gallery arrows and dots. M008 fixed.
2.4.11	Focus Not Obscured (Minimum)	AA	Pass	No focused element is covered: the breadcrumb now sits below the menu bar. M010 fixed.
2.5.1	Pointer Gestures	A	Pass	Carousels can be swiped but also have single-tap arrows.
2.5.2	Pointer Cancellation	A	Pass	Controls act on release (native links and buttons).
2.5.3	Label in Name	A	Pass	Accessible names of the menu, buttons and fields contain their visible text.
2.5.4	Motion Actuation	A	Not applicable	No motion-operated features.
2.5.7	Dragging Movements	AA	Pass	Carousel dragging has arrow-button alternatives.
2.5.8	Target Size (Minimum)	AA	Pass	Verified by automated checks

3. Understandable

Criterion	Name	Level	Status	Details
3.1.1	Language of Page	A	Pass	Verified by automated checks
3.1.2	Language of Parts	AA	Pass	All content is in English.
3.2.1	On Focus	A	Pass	Focusing controls causes no change of context.
3.2.2	On Input	A	Pass	Typing in fields causes no change of context.
3.2.3	Consistent Navigation	AA	Pass	The main menu has the same items in the same order on every template, including project and category pages.

Criterion	Name	Level	Status	Details
3.2.4	Consistent Identification	AA	Pass	Repeated components (menu, contact links, contact form) are identified the same way.
3.2.6	Consistent Help	A	Pass	Phone, email and address are in the header in the same order on every template.
3.3.1	Error Identification	A	Pass	Empty and invalid submissions are stopped by the browser's built-in validation, which focuses the first problem field and describes the error in text (checked at desktop and mobile). NVDA announces the error as an alert: "First Name, edit, required, blank. Please fill out this field."
3.3.2	Labels or Instructions	A	Pass	Both contact forms show visible labels, and required fields carry an asterisk (dark red on white, orange on the dark sidebar). M002 fixed.
3.3.3	Error Suggestion	AA	Pass	The email error suggests the fix (missing @).
3.3.4	Error Prevention (Legal, Financial, Data)	AA	Not applicable	No legal, financial or data-changing submissions.
3.3.7	Redundant Entry	A	Not applicable	Single-step form; nothing is asked twice.
3.3.8	Accessible Authentication (Minimum)	AA	Not applicable	No sign-in.

4. Robust

Criterion	Name	Level	Status	Details
4.1.2	Name, Role, Value	A	Pass	Carousel slides no longer take focus, slide panels are named ("1 of 7") and arrows are named ("Previous slide", "Next slide"); automated checks pass. M006 fixed.
4.1.3	Status Messages	AA	Pass	Sending the contact form shows "Your submission was successful." in a role="alert" message, which screen readers announce without moving focus. Checked with a real submission on the local copy in Audsey's test mode (nothing sent). Errors use the browser's own validation, which is announced.

Issues by priority

Issues are grouped by root cause: one problem repeated on many pages appears once, with its count. Priority weighs severity, how many pages it reaches and whether it sits in a key journey. Each card is marked Error or Contrast error, matching the counts on the cover.

No issues were found.

⚠ Items needing review (alerts)

The engines flagged these as possible problems they can't decide on their own (for example text over images, where contrast can't be measured). They are not counted as failures until confirmed in the manual review.

None open.

Checked by hand

125 groups (1670 elements) were checked by a person and closed; they are not counted as open alerts or in the score.

Alert	WCAG	Elements	Decision
Check the keyboard focus indicator is visible when using CSS declaration for 'border' or 'outline'	2.4.7	96	Checked: no problem: Checked in the keyboard walk-through (review 2026-11-04-b): each of these controls shows a visible focus indicator. The gallery arrows and dots use a 3px outline added in the fixes; the reCAPTCHA checkbox uses Google's own.
The foreground text and its background color are both detected as #fcf8f5. Verify the text meets the WCAG AA requirements for minimum contrast	1.4.3	96	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 96 elements show no visible text (for example slide dots), so there is no text contrast to meet.
Verify the contrast ratio of the text against the lightest and the darkest colors of the background meets the WCAG AA minimum requirements for text of size 14px and weight of 400	1.4.3	55	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 55 elements show no visible text (for example slide dots), so there is no text contrast to meet.

Alert	WCAG	Elements	Decision
Verify the contrast ratio of the text against the lightest and the darkest colors of the background meets the WCAG AA minimum requirements for text of size 18px and weight of 400	1.4.3	55	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 55 elements show no visible text (for example slide dots), so there is no text contrast to meet.
The foreground text and its background color are both detected as #ffffff. Verify the text meets the WCAG AA requirements for minimum contrast	1.4.3	52	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 17 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 9.14:1 where 4.5:1 is needed; 35 elements show no visible text (for example slide dots), so there is no text contrast to meet.
The foreground text and its background color are both detected as #ffffff. Verify the text meets the WCAG AA requirements for minimum contrast	1.4.3	52	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 17 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 8.59:1 where 3:1 is needed; 35 elements show no visible text (for example slide dots), so there is no text contrast to meet.
Verify important background image information has a text alternative in system high contrast mode	1.1.1	52	Checked: no problem: Decorative background photos behind sections, the footer and buttons; they carry nothing that isn't in the text. On the About page the flip boxes show team portraits, and each person's name and role are in the text on the back of the box.
Confirm this text 'President' is used as a heading and if so, modify to use a heading element or role	1.3.1	52	Checked: no problem: Not headings: addresses, phone numbers, client lists and team bios that use line breaks or bold for layout. The page headings themselves were corrected in the heading-structure fix.
Elements must meet minimum color contrast ratio thresholds	1.4.3	42	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 13 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 10.7:1 where 4.5:1 is needed; 29 elements show no visible text (for example slide dots), so there is no text contrast to meet.

Alert	WCAG	Elements	Decision
Elements must meet minimum color contrast ratio thresholds	1.4.3	42	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 13 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 10.41:1 where 4.5:1 is needed; 29 elements show no visible text (for example slide dots), so there is no text contrast to meet.
Elements must meet minimum color contrast ratio thresholds	1.4.3	40	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 40 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 17.62:1 where 4.5:1 is needed.
Elements must meet minimum color contrast ratio thresholds	1.4.3	35	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 35 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 14.41:1 where 4.5:1 is needed.
If the following text is a quotation, mark it as a <q> or <blockquote> element: "We used Sample Construction Co. to bu ... all possible. Highly recommend!"	1.3.1	35	Checked: no problem: The testimonials sit in Elementor's testimonial component with quotation marks and the client's name, so it is clear to every reader that they are quotations.
Verify the contrast ratio of the text against the lightest and the darkest colors of the background meets the WCAG AA minimum requirements for text of size 18px and weight of 400	1.4.3	30	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 30 elements show no visible text (for example slide dots), so there is no text contrast to meet.
Verify the contrast ratio of the text against the lightest and the darkest colors of the background meets the WCAG AA minimum requirements for text of size 14px and weight of 400	1.4.3	30	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 30 elements show no visible text (for example slide dots), so there is no text contrast to meet.
Elements must meet minimum color contrast ratio thresholds	1.4.3	28	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 28 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 12.92:1 where 4.5:1 is needed.

Alert	WCAG	Elements	Decision
Confirm this text 'State A (Lic. #000001)' is used as a heading and if so, modify to use a heading element or role	1.3.1	28	Checked: no problem: Not headings: addresses, phone numbers, client lists and team bios that use line breaks or bold for layout. The page headings themselves were corrected in the heading-structure fix.
Confirm this text 'Restaurant Brand B' is used as a heading and if so, modify to use a heading element or role	1.3.1	28	Checked: no problem: Not headings: addresses, phone numbers, client lists and team bios that use line breaks or bold for layout. The page headings themselves were corrected in the heading-structure fix.
Elements must meet minimum color contrast ratio thresholds	1.4.3	26	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 4 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 11.58:1 where 4.5:1 is needed; 22 elements show no visible text (for example slide dots), so there is no text contrast to meet.
Elements must meet minimum color contrast ratio thresholds	1.4.3	26	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 4 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 11.42:1 where 4.5:1 is needed; 22 elements show no visible text (for example slide dots), so there is no text contrast to meet.
Confirm that when the element receives focus, it is not covered or, if covered by user action, can be uncovered without moving focus	2.4.11	24	Checked: no problem: Checked in the keyboard walk-through of every template at desktop and mobile (review 2026-11-04-b): no focused element is covered by the header or anything else.
Elements must meet minimum color contrast ratio thresholds	1.4.3	20	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 20 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 14.54:1 where 4.5:1 is needed.

Alert	WCAG	Elements	Decision
Elements must meet minimum color contrast ratio thresholds	1.4.3	20	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 20 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 17.62:1 where 4.5:1 is needed.
Confirm this text 'Our Construction' is used as a heading and if so, modify to use a heading element or role	1.3.1	19	Checked: no problem: Not headings: addresses, phone numbers, client lists and team bios that use line breaks or bold for layout. The page headings themselves were corrected in the heading-structure fix.
Confirm this text '555-010-0100' is used as a heading and if so, modify to use a heading element or role	1.3.1	18	Checked: no problem: Not headings: addresses, phone numbers, client lists and team bios that use line breaks or bold for layout. The page headings themselves were corrected in the heading-structure fix.
Elements must meet minimum color contrast ratio thresholds	1.4.3	16	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 16 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 17.62:1 where 4.5:1 is needed.
Elements must meet minimum color contrast ratio thresholds	1.4.3	16	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 16 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 12.54:1 where 4.5:1 is needed.
Confirm that when the element receives focus, it is not covered or, if covered by user action, can be uncovered without moving focus	2.4.11	16	Checked: no problem: Checked in the keyboard walk-through of every template at desktop and mobile (review 2026-11-04-b): no focused element is covered by the header or anything else.
Check the keyboard focus indicator is visible when using CSS declaration for 'border' or 'outline'	2.4.7	16	Checked: no problem: Checked in the keyboard walk-through (review 2026-11-04-b): each of these controls shows a visible focus indicator. The gallery arrows and dots use a 3px outline added in the fixes; the reCAPTCHA checkbox uses Google's own.

Alert	WCAG	Elements	Decision
Check the keyboard focus indicator is visible when using CSS declaration for 'border' or 'outline'	2.4.7	16	Checked: no problem: Checked in the keyboard walk-through (review 2026-11-04-b): each of these controls shows a visible focus indicator. The gallery arrows and dots use a 3px outline added in the fixes; the reCAPTCHA checkbox uses Google's own.
The input element does not have an associated visible label	2.5.3, 3.3.2	16	Checked: no problem: Icon-only arrow buttons named "Previous slide" and "Next slide": there is no visible text label for the name to match, and the arrows are a widely understood convention.
The input element does not have an associated visible label	2.5.3, 3.3.2	16	Checked: no problem: Icon-only arrow buttons named "Previous slide" and "Next slide": there is no visible text label for the name to match, and the arrows are a widely understood convention.
Elements must meet minimum color contrast ratio thresholds	1.4.3	14	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 14 elements meet the minimum against both the darkest and the lightest background pixels; the lowest is 14.84:1 where 4.5:1 is needed.
Verify important background image information has a text alternative in system high contrast mode	1.1.1	14	Checked: no problem: Decorative background photos behind sections, the footer and buttons; they carry nothing that isn't in the text. On the About page the flip boxes show team portraits, and each person's name and role are in the text on the back of the box.
Confirm this text 'Restaurant Brand A' is used as a heading and if so, modify to use a heading element or role	1.3.1	14	Checked: no problem: Not headings: addresses, phone numbers, client lists and team bios that use line breaks or bold for layout. The page headings themselves were corrected in the heading-structure fix.
Verify important background image information has a text alternative in system high contrast mode	1.1.1	13	Checked: no problem: Decorative background photos behind sections, the footer and buttons; they carry nothing that isn't in the text. On the About page the flip boxes show team portraits, and each person's name and role are in the text on the back of the box.

Check the keyboard focus indicator is visible when using CSS declaration for 'border' or 'outline'	2.4.7	2	Checked: no problem: Checked in the keyboard walk-through (review 2026-11-04-b): each of these controls shows a visible focus indicator. The gallery arrows and dots use a 3px outline added in the fixes; the reCAPTCHA checkbox uses Google's own.
Elements must meet minimum color contrast ratio thresholds	1.4.3	1	Checked: no problem: Measured on the rendered page with the text hidden (Audsey contrast helper, review 2026-11-04-b): 1 element meet the minimum against both the darkest and the lightest background pixels; the lowest is 19.26:1 where 4.5:1 is needed.
Confirm that when the element receives focus, it is not covered or, if covered by user action, can be uncovered without moving focus	2.4.11	1	Checked: no problem: Checked in the keyboard walk-through of every template at desktop and mobile (review 2026-11-04-b): no focused element is covered by the header or anything else.

Remediation roadmap

In priority order. Effort is a rough guide: **S** is one fix in a shared template or element, **M** a few places, **L** many separate content fixes.

#	Issue	Severity	WCAG	Pages	Effort

Method and limitations

How we tested. Automated scanning with two independent engines, axe-core 4.14.0 and IBM Equal Access 4.0.34 (WCAG_2_2 rules), in Chromium 156.0.8078.4, plus an AI-assisted manual review on November 4, 2026: keyboard walk-through, accessibility-tree inspection, reflow, zoom and text-spacing checks, and judgment checks.

Coverage. 10 pages at desktop (1366×900) and mobile (390×844). Pages were taken from the site's sitemap and are listed in the appendix. Each page was also scanned in 5 interactive states: projects carousel, next slides, testimonials, next slides, contact form errors, team card flipped, mobile menu open. Carousels were paused during scans so every run sees the same slides.

How results are combined. When both engines flag the same element for the same criterion, it is reported once with high confidence. Possible problems the engines can't decide are listed as items needing review and are not counted as failures. Issues are grouped by root cause so repeated problems count once.

Scoring. Each criterion is Pass, Partial, Fail, Not applicable or Needs human verification. The accessibility index is 100 × the weighted share of decided criteria met, where Pass = 1, Partial = 0.5, Fail = 0 and Level A counts 1.5× against 1× for AA. Not applicable and Needs human verification are left out of the index and shown separately. Severity weights: critical 10, serious 5, moderate 2, minor 1. Rubric version 1.1.0.

What automated testing can't do. Engines can prove many failures but cannot prove most passes. A clean automated result counts as a pass only for 1.3.5, 1.4.3, 2.5.8, 3.1.1; everything else needs a human decision. Judgment checks such as whether alt text is meaningful, whether instructions are clear, or whether focus order makes sense are covered by the manual review.

Screen readers. An automated screen-reader pass with NVDA 2026.2 (via Guidepup 0.36.4) and Google Chrome on November 4, 2026 listened to the headings and landmarks lists, the Tab order and the form's error messages on `/`, `/about/`, `/portfolio/`, `/under-construction/`, `/contact/`, `/site-map/`, `/category/current-projects-p/`, `/category/current-projects-uc/`, `/category/upcoming-projects-p/`, `/projects/sample-office-building/`. It records what the screen reader says but is not the same as a person using one; for a formal conformance claim we recommend verification by an experienced screen-reader user (and VoiceOver with Safari if most visitors use Apple devices).

Review of results. We checked the automated results by hand: 1 result set aside as false positives (not scored), 125 alerts checked and found to meet the criterion, 0 accepted risk, 0 won't fix and 0 fixed and awaiting the next scan. Accepted and won't-fix issues are still scored and shown with their reasons.

- False positive: Environment only: the reCAPTCHA box shows a 'domain not supported' error on the local copy of the site because its key is registered for the live domain. The live site doesn't show this text.

The accessibility index is not a percentage of compliance and should not be quoted as one.

About this report

This report records automated testing and an AI-assisted manual review of the pages, screen sizes and dates listed in it. It evaluates conformance with WCAG 2.2 Level A and AA at that time. It is not a certification or legal opinion, and it does not guarantee compliance with the Americans with Disabilities Act, Section 508 or any other law, or protection from claims. Automated and AI-assisted testing cannot find every barrier; testing by people who use assistive technology may find issues this report does not. Websites change, and the results apply only to the content tested. Use of this report is subject to the Audsey terms at https://audsey.com/terms.

Appendix: pages and run details

Pages scanned

Page	Template
/	Home
/about/	Page
/category/current-projects-p/	Project category
/category/current-projects-uc/	Project category
/category/upcoming-projects-p/	Project category
/contact/	Contact
/portfolio/	Page
/projects/sample-office-building/	Project
/site-map/	Page
/under-construction/	Page

Public pages not scanned

These pages are listed in the sitemap and load publicly, but were left out of scope (old or sample content). We recommend unpublishing them or removing them from the sitemap.
